
TISAX

(Trusted Information Security Assessment Exchange)

What is TISAX?

TISAX is an automotive industry standard for assessing the Information Security Management Systems (ISMS) of companies that is based on key aspects of the international standard ISO/IEC 27001. It was launched in 2017 by the German Association of the Automotive Industry (VDA) and is managed by the ENX Association as a neutral authority.

The basis of the TISAX certification is the VDA Information Security Assessment (ISA). The ISA is a standardized catalogue of requirements for the ISMS covering the specific needs of the automotive industry.

Who can perform the audit according to TISAX?

The effectiveness of an ISMS is demonstrated by successfully passing an independent audit performed by an audit provider that is authorized by the ENX Association. A company can select an authorized audit provider and expect standardized assessment results which are accepted by other TISAX participants throughout the automotive industry.

What does TISAX label mean?

After passing the audit, a company receives a corresponding TISAX label. The label confirms if the company's ISMS complies with defined security levels, and allows sharing of assessment results across a designated platform of ENX Association ([Home · ENX Portal](#)).

Where can you view the TISAX results from NTT GDC EMEA?

TISAX allows recognition of audit results among participants. It means that the exchange of results within TISAX is only possible for registered participants via the ENX platform. No certificates are issued for the TISAX certification.

As a registered participant, you can check the shared results of NTT Global Data Centers EMEA by adding any of the data below into the search field:

Company Name: **NTT Global Data Centers EMEA GmbH**

Scope ID: **SKP6HM**

In the following screenshot you can see the current TISAX status, validity and certified locations of NTT GDC EMEA.
